

Installation Instructions

D1000.2 EA and D1000.2 WA

Warning and Attention Symbols

You must practice safety when installing and using the DISH D1000.2 Eastern Arc (EA) or D1000.2 Western Arc (WA) antenna assembly. If you perform some of the procedures in this guide carelessly, you could injure or kill yourself or damage equipment or property. Procedures that require your special attention are indicated by the following symbols:

This symbol indicates a procedure in which the following may happen:

- Personal injury or death may occur.
- Equipment or property may be damaged.

This symbol indicates the following:

- Important operation or maintenance instructions follow.
- Special attention is required.

Important Safety Instructions

Follow these safety instructions when installing the D1000.2 EA or WA antenna assembly:

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.

Follow these guidelines during installation:

- Before you drill any holes in the building or residence, ensure that there are no wires or pipes near the holes.
- Never install the antenna assembly near power lines.
- Do not install the antenna assembly on composite materials such as strand, chip, fiber, or particle board unless the fastener attaches securely to a wall stud, rafter, or other foundation material beneath the surface.
- Install the equipment in accordance with local building and electrical codes. If you are unsure of the proper codes, call a licensed building inspector or electrician for help.

Note to Satellite TV System Installer: This reminder is provided to call the antenna installer's attention to the National Electrical Code® (NEC), which provides guidelines for proper bonding and grounding of antennas and their associated cabling.

Overview

Attention! These installation instructions are intended for use only by qualified professional technicians due to the complexity of the installation and compliance with local/national building and electrical codes.

Never handle coaxial cable installations that are connected to a receiver or accessory when that receiver or accessory is plugged in to a live AC outlet.

These instructions will guide you through the installation of a DISH D1000.2 EA (Eastern Arc) and D1000.2 WA (Western Arc) antenna assembly, which consists of a satellite reflector and a DISH Pro Plus (DPP) or DISH Pro Hybrid (DPH) LNBF.

Note: These installation instructions cover wall mounting only. For other mounting options (for example, pole mounting or non-penetrating mounting), visit the DISH Retailer Care Site at retailer.dish.com.

The D1000.2 antenna assembly is capable of receiving satellite television signals from the DBS satellite orbits and LNBFs shown below in Table 1:

Table 1: D1000.2 LNBF Attributes

LNBF	Satellite Orbits	LNB In Port	# of Receiver Ports	Additional Receivers via Switch
DPP EA Twin 	61.5°W, 72.7°W	No	3	Yes
DPH EA Twin 	61.5°W, 72.7°W	Yes	2	No
DPP WA Triple 	119°W, 110°W, 129°W	Yes	3	Yes
DPH WA Triple 	119°W, 110°W, 129°W*	Yes	2	No

*The DPH WA Triple LNBF has no receiver port that defaults to 129°, but this orbit is still provided when the receiver tunes to it.

DPH LNBFs

The new DPH LNBFs have been introduced to support current receivers and more recent DPZ receivers. DPH LNBFs also simplify cabling and improve efficiency in installations.

DPH LNBFs have two satellite output ports and one input port for access to an additional satellite orbit through one of the following LNBF types: DP Single, DP Dual, DP Dual Band (DP 500+), or DISH Bandstacked (SuperDISH DBS/FSS). Depending on the type of receivers in the installation, output ports will operate in one of the following modes (detected automatically when the LNBF connects to the receiver):

Receiver Ports 1 and 2

- Single Bandstack (DP receivers)
- Dual Bandtranslate (DPP receivers)
- Triple Bandtranslate (DPX receivers)

Receiver Port 1 Only

- Digital Channel Stack (DPZ receivers)

DPH LNBFs support DPX receiver installations (Hopper®, Hopper with Sling®, and Super Joey™ non-client receivers) under the following conditions:

- Only DPH networking devices may be used in the installation. This will always include a Solo Hub or Duo Hub, and if required, a DPH Tap.
- No DPX devices—including a Solo Node, Duo Node, Tap, Isolator, or Integrator—may be used.
- In an installation that includes a DPH LNBF and Super Joey receiver, a Solo Hub or Duo Hub replaces the need for an Integrator. If the Integrator is present from a previous installation, replace it with a Solo Hub* or Duo Hub, depending on the coaxial path of the Hopper receiver and the presence of other receivers in the installation. Also, terminate any unused ports on the Solo Hub or Duo Hub.

**Two Solo Hubs are required in this type of installation—one to replace the Integrator and one for the Hopper receiver.*

Supported Receivers

All D1000.2 LNBFs support the installation of DISH Pro (DP), DISH Pro Plus (DPP), DISH Pro Extreme (DPX), and DISH Pro Z (DPZ) receivers, the logos of which appear on the back of the receiver and are shown below:

Table 2 below summarizes the receivers that D1000.2 LNBFs support:

Table 2: Supported Receivers by LNBF

LNBF		DPZ	DPX	DPP	DP	Legacy
DPH EA Twin		✓	✓	✓	✓	
DPH WA Triple		✓	✓	✓	✓	
DPP EA Twin			✓	✓	✓	
DPP WA Triple			✓	✓	✓	✓
DP WA Single/Dual					✓	

Please note the following:

- A DPP LNBF supports a direct connection of up to three host (non-client) satellite receivers.
- Only DPH LNBFs support DPZ receivers. The DPP EA Twin and DPP WA Triple LNBFs do not support DPZ receivers.
- A DPZ receiver must be connected only to Port 1 of the DPH LNBF.
- Due to limitations of receiver power supplies, a DPP44 Power Inserter must be added between a DPH Hub and DP or DPP receiver connected to a DPH LNBF.
- A DPP44 Power Inserter is not required when installing a Super Joey with a Hopper receiver, but the Hopper receiver must be connected to Port 1 of the DPH LNBF and the Super Joey to Port 2.
- Legacy receivers, which predate the DP series and do not have one of the above logos, are supported by only the DPP WA Triple LNBF—but only if there is at least one DP or DPP receiver in the installation. No other D1000.2 LNBFs support an installation that includes a Legacy receiver.

Quick Installation Instructions: Eastern Arc (EA)

Figure 1: Antenna Assembly Overview for DPP/DPH EA Twin LNBF

1. Find the elevation, skew, and azimuth angles for your location (instructions on page 9; table begins on page 25).
2. Find a location for the satellite reflector with a clear line of sight and a sturdy mounting surface (page 9, step 1).
3. Mount the mast, making sure it is absolutely vertical (page 9–10, steps 2–3).
4. Assemble the antenna assembly, setting the skew and elevation angles in the process (pages 10–12, steps 4–6). Use additional skew bolts for skew angles greater than 110° or less than 70° .
5. Mount the antenna assembly on the mast and point the satellite reflector to the azimuth angle (page 12, step 7).
6. Using a peaking meter attached to the DPP or DPH EA Twin LNBF **Port 1**, peak the satellite reflector on 72.7°W using transponder 13 for maximum strength (page 13, steps 1–2).
7. Tighten all bolts and reconfirm a maximum signal (page 14, steps 3–4).
8. From the antenna assembly, run coaxial cable for the receiver, leaving a service loop around the mast clamp.
9. For DPX receiver installations with the DPH EA Twin LNBF, connect the coaxial cable from the receiver to the hub, and from the hub to the LNBF's **Port 1** (and **Port 2** if necessary) (page 15, steps 1–2). For DPX receiver installations with the DPP EA Twin LNBF, connect the coaxial cable from the receiver to the node, and from the node to the LNBF's **Port 1** and **Port 2** (page 15, steps 1–2). For DP/DPX receiver installations, connect the coaxial cable(s) from the receiver to the DPP/DPH EA Twin LNBF's **Port 1** (and **Port 2** and/or **Port 3** if necessary) (pages 15–16, steps 1–2).
10. Connect each receiver to a TV and power on both devices. When the receiver's setup wizard displays, follow the on-screen prompts (page 16, step 3). When finished, continue with step 12 below. If the setup wizard does not display, run Check Switch and confirm reception at 72.7°W and 61.5°W (pages 17–18, steps 4–5). Then continue with step 11.
11. Download the latest software if you have not already (page 18, step 6).
12. Run Check Switch and confirm reception of 72.7°W and 61.5°W (page 18, step 7).
13. If necessary, install an additional receiver (page 18, step 8) and/or satellite orbit (page 22–22).

Quick Installation Instructions: Western Arc (WA)

Figure 2: Antenna Assembly Overview for DPP/DPH WA Triple LNB

1. Find the elevation, skew, and azimuth angles for your location (instructions on page 9; table begins on page 31).
2. Find a location for the satellite reflector with a clear line of sight and a sturdy mounting surface (page 9, step 1).
3. Mount the mast, making sure it is absolutely vertical (page 9–10, steps 2–3).
4. Assemble the antenna assembly, setting the skew and elevation angles in the process (pages 10–12, steps 4–6). Use additional skew bolts for skew angles greater than 110° or less than 70°.
5. Mount the antenna assembly on the mast and point the satellite reflector to the azimuth angle (page 12, step 7).
6. Using a peaking meter attached to the DPP or DPH WA Triple LNB **Port 1**, peak the satellite reflector on 119°W using transponder 13 for maximum strength (page 13, steps 1–2).
7. Tighten all bolts and reconfirm a maximum signal (page 14, steps 3–4).
8. From the antenna assembly, run coaxial cable for the receiver, leaving a service loop around the mast clamp.
9. For DPZ and DPX receiver installations with the DPH WA Triple LNB, connect the coaxial cable from the receiver to the hub, and from the hub to the LNB's **Port 1** (and **Port 2** if necessary) (page 15, steps 1–2). For DPX receiver installations with the DPP WA Triple LNB, connect the coaxial cable from the receiver to the node, and from the node to the DPP WA Triple LNB's **Port 1** (and **Port 2** and/or **Port 3** if necessary) (page 15, steps 1–2). For DP/DPP receiver installations, connect the coaxial cable(s) from the receiver to the DPP/DPH WA Triple LNB's **Port 1** (and **Port 2** and/or **Port 3** if necessary) (pages 15–16, steps 1–2).
10. Connect each receiver to a TV and power on both devices. When the receiver's setup wizard displays, follow the on-screen prompts (page 16, step 3). When finished, continue with step 12 below. If the setup wizard does not display, run Check Switch and confirm reception at 119°W, 110°W, and 129°W (pages 17–18, steps 4–5). Then continue with step 11.
11. Download the latest software if you have not already (page 18, step 6).
12. Run Check Switch and confirm reception of 119°W, 110°W, and 129°W (page 18, step 7).
13. If necessary, install an additional receiver (page 18, step 8) and/or satellite orbit (page 22–22).

Full Installation Instructions: EA and WA

Locating the Antenna Assembly

Based on the installation work order and program market, you will be installing an Eastern Arc or Western Arc LNBF. Refer to Table 1 on page 1 to determine the appropriate LNBF to use and if installing a switch is necessary.

To find the correct elevation, skew, and azimuth angles using the ZIP code of the customer's location, see the relevant table for reflector angles: Eastern Arc (page 25) or Western Arc (page 31). Then write down the angles in the spaces provided below.

Elevation: _____ Skew: _____ Azimuth: _____

Lastly, find a mounting location where the antenna assembly can be pointed toward the satellites that are located at the elevation and azimuth angles.

Assembling and Mounting the Antenna Assembly

- 1. Find a location for the satellite reflector.** Using a compass and the correct azimuth and elevation angles, find a location where the reflector can be pointed toward the satellites located at the angles provided in the relevant *Reflector Angles* table. Specifically:
 - a. Ensure that nothing blocks the line of sight between the reflector and the satellites.
 - b. Verify that the line of sight will not be blocked by future growth of nearby trees or other foliage.
 - c. Ensure that the mounting location provides sufficient clearance to rotate the reflector as needed to point toward the satellites.

- 2. Mount the mast to a solid surface.** Mount the mast to a solid surface so that the reflector cannot move or be bumped out of alignment. Keep in mind that physical and environmental conditions can block the reflector's ability to receive a clear satellite signal. Never mount the antenna assembly to a tree or a public utility pole.

- 3. Align the mast vertically.** Align the top part of the mast so that it is absolutely vertical. If the top part of the mast is not completely vertical by only a few degrees, it will be difficult or impossible for you to locate the satellites.

On the upper mast, use a level to take at least two readings that are 90° apart from one another (see Figure 3 below). Tighten the mast locking nuts to the torque value specified in Table 3 below. The pivot bolts are factory-tightened. Ensure that the mast is still plumb after tightening.

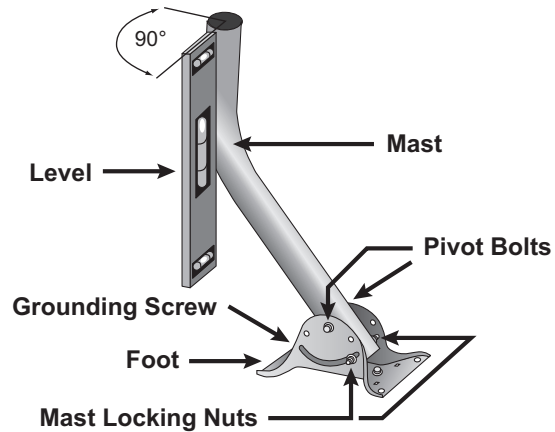

Figure 3: Vertical Alignment of the Mast

Table 3: Torque Values

Item	Torque Value
Pivot bolts	24 ft-lbs. Note: This value is preset at the factory and requires no adjustment in the field. Do not over-torque. The pivot bolts eliminate rocking of the mast and are not intended to augment the mast locking nuts.
Grounding screw	2 ft-lbs
Mast locking nuts	12 ft-lbs
Reflector mounting bolts	6 ft-lbs
Clamp locking bolts	6 ft-lbs
Elevation-adjustment locking nuts	12 ft-lbs
Skew-adjustment locking nuts	12 ft-lbs
LNBF and bracket attachment hardware	(hand-tightened)

- 4. Assemble the antenna assembly without the LNBF.** Assemble the satellite reflector, LNBF, Integrated Adapter Bracket, LNBF arm, mounting bracket, and mast (antenna assembly) as shown in Figure 1 for Eastern Arc (page 7) or Figure 2 for Western Arc (page 8). Do not attach the LNBF assembly at this time.

When attaching the Integrated Adapter Bracket to the LNBF arm, be sure that the small posts on the bracket fit into the holes on the LNBF arm (see Figure 4 below).

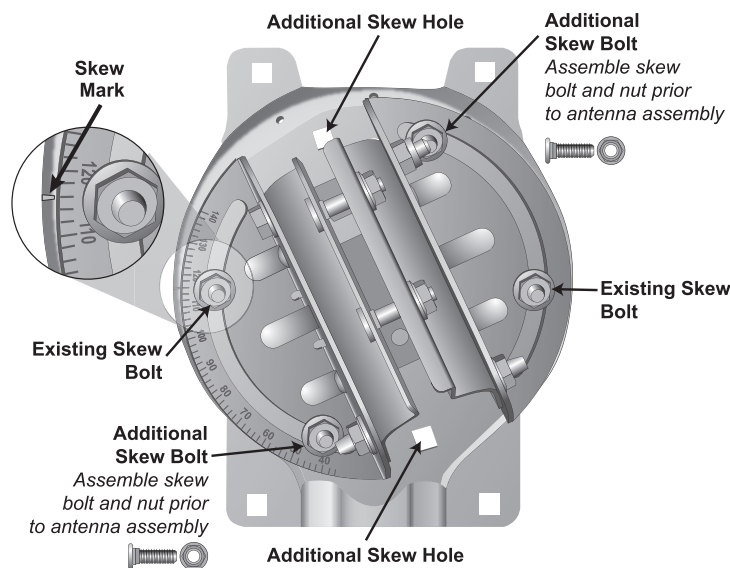

Figure 4: Bracket Posts Fitting into LNBF Arm

- 5. Set the skew.** Loosen both skew bolts. Set the skew by rotating the elevation and skew bracket to align the mark with the required angle on the skew scale that you wrote down on page 9 (see Figure 5 below). Tighten the skew bolts securely to keep the satellite reflector from rotating. See Table 3 on page 10 for the required torque values.

Notes:

- After the skew is set, do not try to fine-tune the skew angle when aiming the satellite reflector.
- If the skew angle is at the extreme ends of the scale (greater than 110° or less than 70°), insert nuts and bolts from the hardware pack into the additional skew holes, which provide greater stability to the satellite reflector at extreme angles (see Figure 5 below).

Figure 5: Additional Skew Holes for Use with Extreme Skew Angles

- 6. Set the elevation.** Set the elevation by loosening the elevation and skew bracket. Tilt the elevation and skew bracket to align the edge of the azimuth plate with the required angle on the elevation scale (see Figure 6 below). Tighten the elevation bolts snugly to prevent movement.

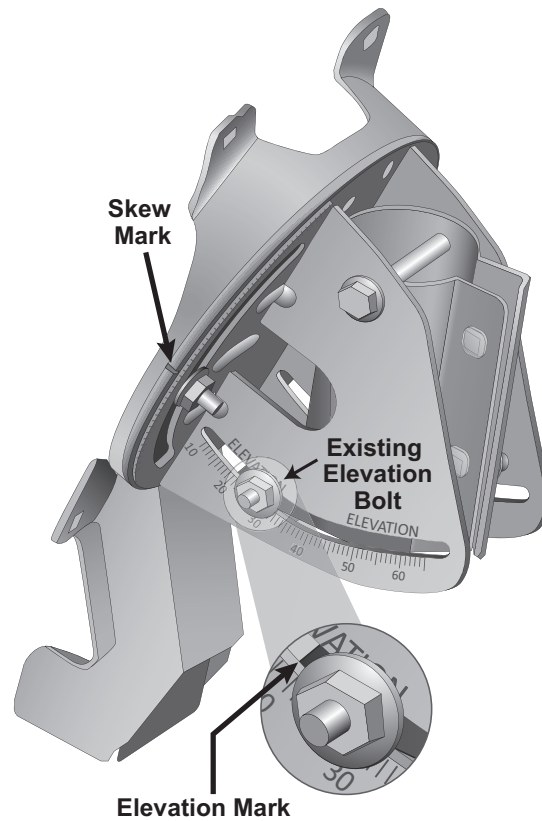

Figure 6: Elevation Mark

- 7. Mount the antenna assembly on the mast and point the satellite reflector.** Slide the antenna assembly down onto the mast. Ensure that the pivot bolt rests on the top of the mast and that the mast is fully inserted into the tab. Using the azimuth angle you wrote down on page 9, turn the satellite reflector so that it points in the general direction of the satellites.

Peaking the Antenna Assembly

Follow this procedure while referring to Figure 1 (page 7) for Eastern Arc or Figure 2 (page 8) for Western Arc.

Note: Use RG-6 coaxial cables from the D1000.2 antenna assembly to each receiver location, meeting the following cabling requirements. Grounding, other devices, and in-home cabling must also meet these requirements:

- RG-6 coaxial cable rated from 950 MHz–3 GHz must be used in every installation. Do not use existing RG-59 cable, which may cause signal loss. Also, ensure that any outdoor connections are made using waterproof F-connectors rated to at least 3 GHz.
- The length of the RG-6 coaxial connection from any receiver to the farthest antenna assembly connected in the system must be no longer than:
 - 200 feet for DP, DPP, DPX, and DPZ receivers
 - 100 feet for Legacy receivers (only in installations using a DPP WA Triple LNBF)
- The coaxial cable length between the D1000.2 antenna assembly and a compatible LNBF from a second antenna assembly must be 80 feet or less.

The coaxial cable's center conductor must extend past the rim of the F-connector—it must be more than flush with the F-connector and no more than the thickness of a nickel.

To ensure a complete seal against moisture, tighten all outdoor coaxial cables up to the torque values recommended by the manufacturer. Damage caused by over-tightening is not covered by the limited warranty.

Tighten all indoor coaxial cables to the receiver only by hand. If you use a wrench, you may over-tighten the connections and damage the receiver.

- 1. Connect the peaking meter to the LNBF and mount the LNBF onto the LNBF support.** Connect a temporary coaxial cable to a peaking meter. Thread the other end of the coaxial cable through the LNBF support and bracket. Connect the temporary coaxial cable to **Port 1** of the LNBF, and attach the LNBF to the bracket with two screws.

Note: If the peaking meter does not produce at least 600 mA to power the LNBF, connect **Port 2** of the LNBF to a satellite input port of a powered DP/DPP receiver, a Solo/Duo Node, or a Solo/Duo Hub that is connected to a powered DPX receiver.

- 2. Peak the satellite reflector for a signal on 72.7°W (for EA) or 119°W (for WA).** Using the azimuth and elevation settings that you wrote down on page 9, peak the satellite reflector for the strongest possible satellite signal on 72.7°W for Eastern Arc or 119°W for Western Arc. Ensure that you are peaking the satellite reflector using transponder 13. Do not adjust the skew.

Note: If you cannot locate the 72.7°W or 119°W signal, try adjusting the elevation up or down by one or two degrees.

3. Tighten the azimuth and elevation nuts. With the peaking meter still connected, tighten the mast locking nuts and the elevation-adjustment locking nuts using the torque values shown in Table 3 on page 10.

4. Reconfirm the signal strength.

Connecting Receivers

Note: If using a DPP44 Switch to connect additional receivers or satellite orbits, start with the instructions on page 20 (EA) or page 21 (WA), then continue with step 2 below.

1. **Connect the LNBF.** Remove the temporary coaxial cable used for peaking the antenna assembly. Then connect the coaxial cable(s) to the ports on the LNBF and thread the cables(s) through the LNBF bracket and arm.
2. **Connect the LNBF to the receiver.** With the satellite receiver not yet powered on, connect the LNBF to each receiver as follows for the appropriate receiver type:

Connecting DPX Receivers to a DPH LNBF

- a. Connect coaxial cables from the DPH LNBF's **Port 1** and **Port 2** to the Solo Hub's or Duo Hub's **To ODU1** and **To ODU2** ports.
- b. From a host or client port on the hub, connect a coaxial cable to the DPX receiver's **To NODE** port.
- c. Connect other receivers and/or client receivers to the hub and Home Video Network (HVN) as necessary.
- d. A Tap on a satellite feed may also be used to provide a connection to the HVN. However, the Tap must be placed between the hub and the receiver.

DPH Tap

DPH Solo Hub

DPH Duo Hub

Connecting DPX Receivers to a DPP LNBF

- a. Connect coaxial cables from the DPP LNBF to the Solo Node's or Duo Node's **To DP PLUS SWITCH OR LNBF** ports. For a Solo Node, connect to **Port 1** and **Port 2** on the LNBF. For a Duo Node, connect to **Port 1**, **Port 2**, and **Port 3**.
- b. From a **To Host** port on the node, connect a coaxial cable to the DPX receiver's **To NODE** port.
- c. Connect other receivers to the node and Home Video Network as necessary. For additional information, see the Product Launch Bulletin for the *Whole-Home HD DVR System*.

Solo Node

Duo Node

Connecting DP or DPP Receivers to any LNBF

To connect DP (single-tuner) or DPP (dual-tuner) receivers with a single coaxial connection, install a DPP Triplexer or a DPP Separator as follows:

- a. Connect a coaxial cable from the DPP LNBF output (**Port 1**, **Port 2**, or **Port 3**) or DPH LNBF output (**Port 1** or **Port 2**) to the DPP Triplexer or DPP Separator input.
- b. Connect coaxial cables between the receiver's **Satellite In 1** and **Satellite In 2** ports to the respective **Satellite In 1** and **Satellite In 2** ports on the DPP Triplexer or DPP Separator.

To Port 1 or 2
on the LNBF

To DPP
Receiver

To Port 1 or 2
on the LNBF

To DPP
Receiver

You must use a DPP Triplexer or DPP Separator to achieve a single-coaxial-connection installation with a dual-tuner receiver. A splitter or other device will not work in this configuration.

Tighten all indoor coaxial cables to the receiver only by hand. If you use a wrench, you may over-tighten the connections and damage the equipment.

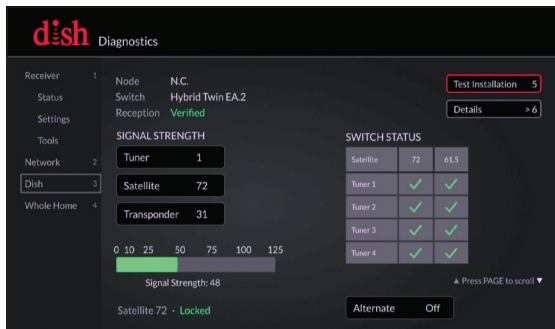

Note for Using a DPH LNBF: Because there is no Home Video Network in an installation with only DP and DPP receivers, it is not necessary to include a DPH hub in the installation.

- 3. Connect the receiver to the TV.** Connect the receiver to the TV and power on all devices. When the receiver's setup wizard displays, follow the on-screen prompts for the wizard to pair the remote to the receiver, download software, and run Check Switch. When the wizard is complete, go to step 8.

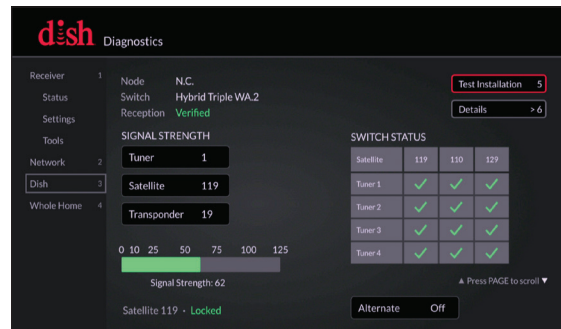

Note: The receiver will not download software if the antenna is pointed incorrectly. If you see a message instructing you to ensure that all cables leading to the receiver are connected securely and correctly, verify that the antenna is pointed correctly before continuing with the wizard.

If the setup wizard does not display at all, continue with the next step.

4. Run Check Switch. Access the Diagnostics screen (on newer receivers) or Point Dish screen (on older receivers) and run Check Switch. When the process finishes, you should see an Installation Summary screen similar to one shown below:

Hopper 3 Receiver with DPH EA Twin LNBF Diagnostics

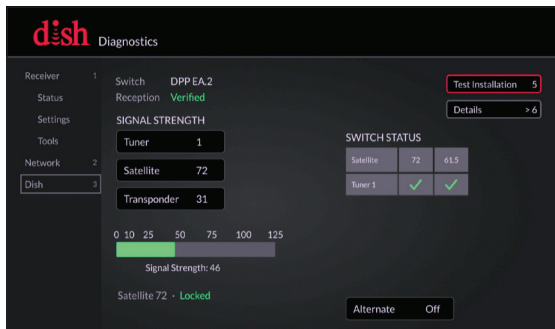

Hopper 3 Receiver with DPH WA Triple LNBF Diagnostics

Wally Receiver with DPH EA Twin LNBF Diagnostics

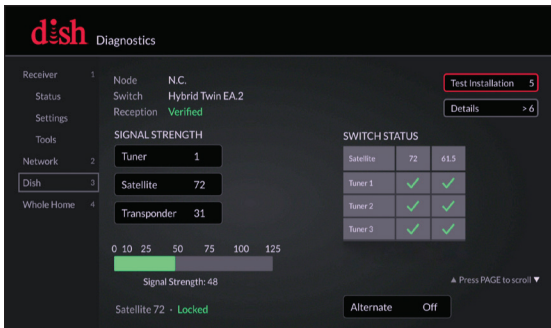

Wally Receiver with DPH WA Triple LNBF Diagnostics

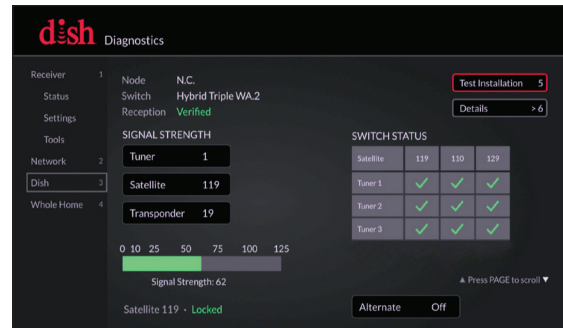

Wally Receiver with DPP EA Twin LNBF Diagnostics

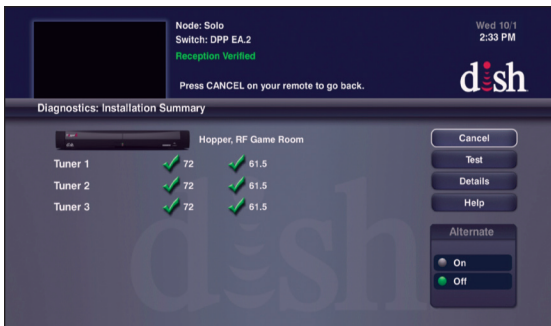

Wally Receiver with DPP WA Triple LNBF Diagnostics

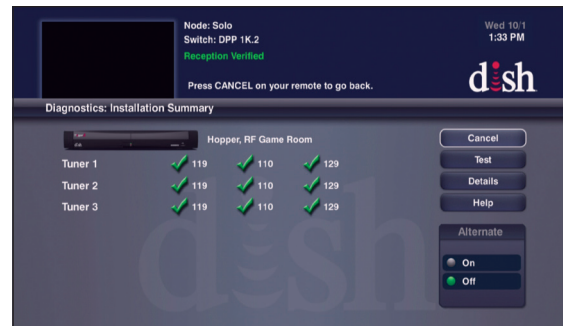

Hopper w/Sling with DPH EA Twin LNBF Diagnostics

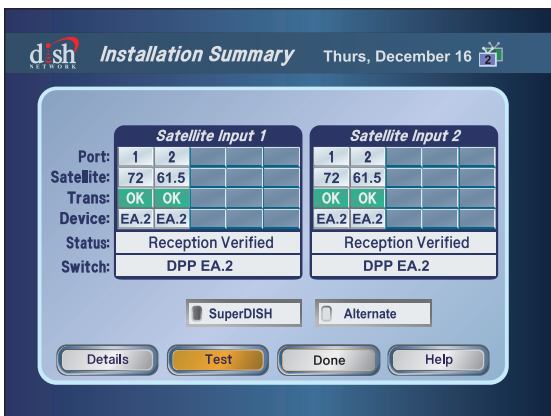

Hopper w/Sling with DPH WA Triple LNBF Diagnostics

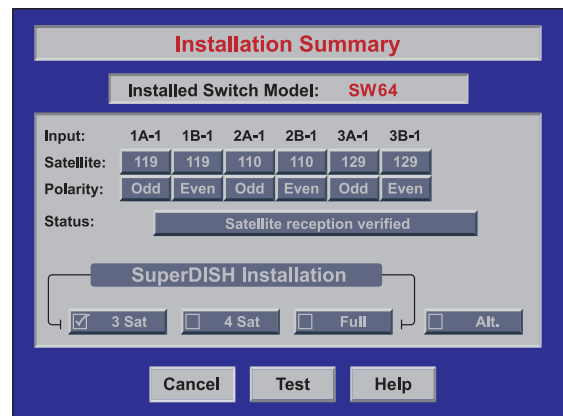

Hopper Receiver with DPP EA Twin LNBF Installation Summary

Hopper Receiver with DPP WA Triple LNBF Installation Summary

DP/DPP Receiver Installation Summary (EA)

Legacy Receiver Installation Summary (WA)

- a. Ensure that the screen shows reception from the appropriate satellites—61.5°W and 72.7°W for EA or 119°W, 110°W, and 129°W for WA—on all available satellite tuners.
- b. Confirm that the LNBF is correctly identified as follows:
 - Eastern Arc: **Hybrid Twin EA.2, DPP EA.2, DPP 1K.2, or DPP Twin**
 - Western Arc: **Hybrid Triple WA.2, DPP WA.2, DPP 1K.2, or DPP Triple**

Note: LNBFs for Legacy receivers are identified as **SW64**.

- 5. Verify that the signal strength bar is green and locked.** Access the Diagnostics or Point Dish screen. For EA, ensure that the signal strength bar is green and locked for the 61.5°W and 72.7°W satellites. For WA, ensure that the signal strength bar is green and locked for the 119°W, 110°W, and 129°W satellites.
- 6. Download the latest software.** Exit the Diagnostics or Point Dish screen and follow the on-screen instructions for downloading the latest software to the receiver. Do not disturb the receiver during the download process. If exiting the Diagnostics or Point Dish screen does not start the download process, put the receiver in Standby Mode for at least 20 minutes (on most receivers) to allow the receiver to download software.
- 7. Run Check Switch.** Run Check Switch again and confirm reception for all satellites on all available satellite tuners. The Installation Summary screen should be similar to one shown in step 4.
- 8. Install another receiver, if necessary.** Repeat the relevant steps in this procedure to install another receiver.

Note for DPP WA Installations Only: If a Legacy receiver is present, install it last (step 8).

Optional Installation: Eastern Arc (EA) with a DPP44 Switch

In a DPP LNB installation that requires at least one additional receiver, you may connect the DPP EA Twin LNB to a DPP44 Switch to acquire the 61.5°W and 72.7°W satellite signals (see Figure 7 below). If a third satellite orbit is needed, the presence of a second DISH antenna assembly is required. Refer to the instructions provided with the DPP44 Switch for additional considerations.

Note: DPP LNBFs are not compatible with DP switches or the DPP33 Switch (when directly connected) in any installation. DPH LNBFs are not compatible with any switch.

1. Connect the LNB(s) and the DPP44 Switch. Remove the temporary coaxial cable used for peaking the satellite reflector. Then connect coaxial cables from the DPP LNB (and the second LNB, if present) to the switch. In this installation, the DPP EA Twin LNB defaults to the following satellite orbits:

- **Port 1** – 72.7°W
- **Port 2** – 61.5°W
- **Port 3** – 72.7°W (not connected when used with the DPP44 Switch)

Figure 7: DPP EA Twin LNB Connected to a DPP44 Switch

2. Proceed with step 2 of the *Connecting Receivers* procedure on page 15.

Optional Installation: Western Arc (WA) with a DPP44 Switch

In a DPP LNB installation that requires at least one additional receiver, you may connect the DPP WA Triple LNB to a DPP44 Switch to acquire the 119°W, 110°W, and 129°W satellite signals (see Figure 8 below). If a fourth satellite orbit is needed, the presence of a second DISH antenna assembly is required. Refer to the instructions provided with the DPP44 Switch for additional considerations.

Note: DPP LNBFs are not compatible with DP switches or the DPP33 Switch (when directly connected) in any installation. DPH LNBFs are not compatible with any switch.

1. Connect the LNBF(s) and the DPP44 Switch. Remove the temporary coaxial cable used for peaking the satellite reflector. Then connect coaxial cables from the DPP LNBF (and the second LNBF, if present) to the switch. In this installation, the DPP WA Triple LNB defaults to the following satellite orbits:

- **Port 1** – 119°W
- **Port 2** – 110°W
- **Port 3** – 129°W

Figure 8: DPP WA Triple LNB Connected to a DPP44 Switch

2. Proceed with step 2 of the *Connecting Receivers* procedure on page 15.

Connecting an Additional Satellite Orbit

Note: This configuration is valid only with DPH LNBFs and a DPP 1000.2 WA Triple LNBF because they have an LNBF input port to accommodate an additional satellite orbit.

After completing the previous sections to fully install the D1000.2, follow these instructions to add a third (for EA) or fourth (for WA) satellite orbit from a second DISH antenna assembly. The LNBF from the additional satellite orbit must be a DP Single, DP Dual, or a DISH Bandstacked FSS and DBS LNBF.

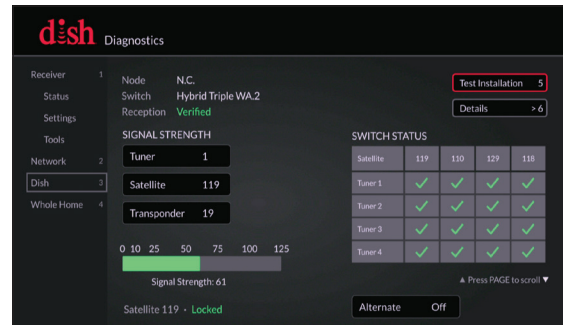

- 1. Install and peak the second antenna assembly.** Install and peak the second antenna assembly using a peaking meter and the instructions that came with the assembly. Skip any steps regarding downloading receiver software, since this was done previously.
- 2. Connect cable between the two LNBFs.** Run and connect coaxial cable from the second LNBF to the **LNB In** port on the DPP WA Triple LNBF, DPH EA Twin LNBF, or DPH WA Triple LNBF, referring to Figure 2 on page 8 and the coaxial cable requirements stated in *Peaking the Antenna Assembly* on page 13.

3. Run Check Switch. For each connected receiver, access the Diagnostics screen (on newer receivers) or Point Dish screen (on older receivers) and run Check Switch. On Legacy receivers, select **SuperDISH Installation-4Sat** or **Test**.

When the Check Switch procedure finishes, you should see a screen similar to one shown below:

**Hopper 3 Receiver with DPH EA Twin LNBF
Diagnostics with Extra Orbit**

**Hopper 3 Receiver with DPH WA Triple LNBF
Diagnostics with Extra Orbit**

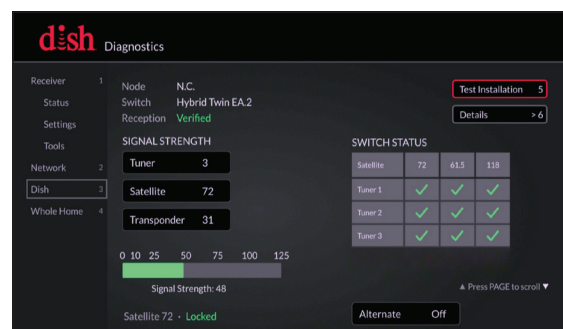

**Wally Receiver with DPH EA Twin LNBF
Diagnostics with Extra Orbit**

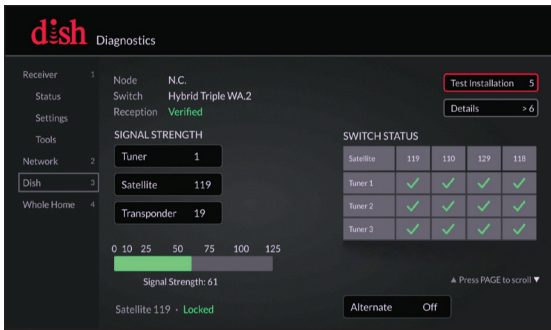

**Wally Receiver with DPH WA Triple LNBF
Diagnostics with Extra Orbit**

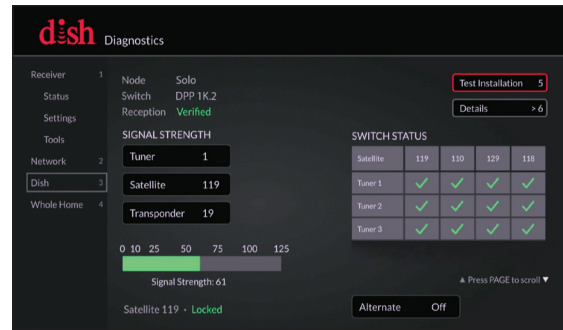

**Wally Receiver with DPP WA Triple LNBF
Diagnostics with Extra Orbit**

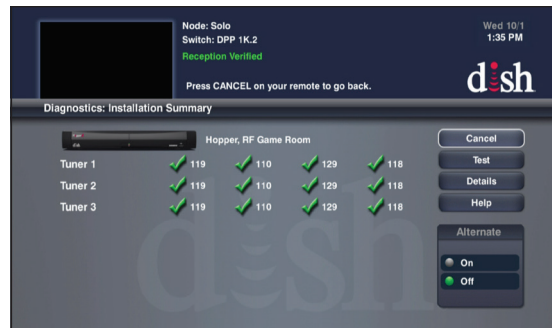

**Hopper w/Sling with DPH EA Twin LNBF
Installation Summary with Extra Orbit**

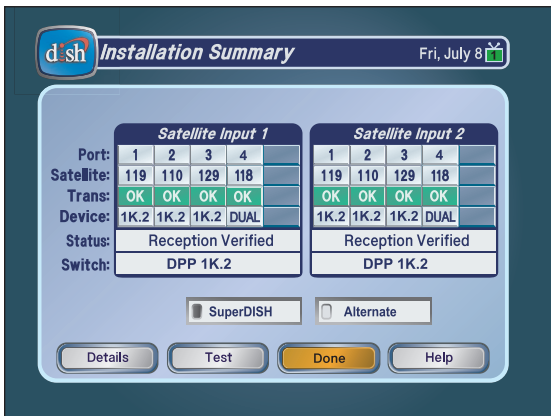

Hopper w/Sling with DPH WA Triple LNBF Installation Summary with Extra Orbit

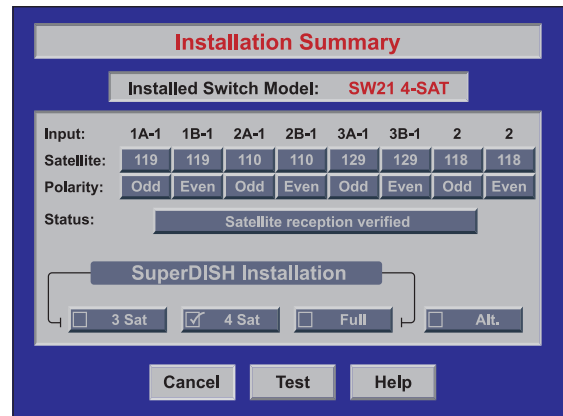

Hopper w/Sling with DPP WA Triple LNBF Installation Summary with Extra Orbit

Hopper Receiver with DPP WA Triple LNBF Installation Summary with Extra Orbit

DP/DPP Receiver with DPP WA Triple LNBF Installation Summary with Extra Orbit

Legacy Receiver with DPP WA Triple LNBF Installation Summary with Extra Orbit

4. Ensure Proper Reception. For an EA installation, ensure that the screen shows reception from 61.5°W, 72.7°W, and a third satellite orbit from the second antenna assembly. For a WA installation, ensure that the screen shows reception from 119°W, 110°W, 129°W, and a fourth satellite orbit from the second antenna assembly.

If an additional satellite orbit is missing, re-peak the appropriate antenna assembly to achieve the required signal levels.

Eastern Arc Satellite Reflector Angles

Follow the instructions below to determine the correct Eastern Arc reflector angles. For Western Arc reflector angles, go to page 31.

1. In the table below, find the ZIP code for the customer's location.
2. Find the row that contains the ZIP code or the first three digits of the ZIP code. For example, the correct row for ZIP code 80112 is 801XX.
3. Write down the number in the EL column in the "Elevation" blank on page 9.
4. Write down the number in the SK column in the "Skew" blank on page 9.
5. Write down the number in the AZ column in the "Azimuth" blank on page 9.

ZIP Code	EL	SK	AZ
00008	9	60	91
00013	24	48	104
00019	23	49	104
00020	25	47	105

Western Arc Satellite Reflector Angles

Follow the instructions below to determine the correct Western Arc reflector angles. For Eastern Arc reflector angles, go to page 25.

1. In the table below, find the ZIP code for the customer's location.
2. Find the row that contains the ZIP code or the first three digits of the ZIP code. For example, the correct row for ZIP code 80112 is 801XX.
3. Write down the number in the EL column in the "Elevation" blank on page 9.
4. Write down the number in the SK column in the "Skew" blank on page 9.
5. Write down the number in the AZ column in the "Azimuth" blank on page 9.

Federal Communications Commission (FCC) Notification Regulatory Information

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Do not make changes or modifications to this equipment. This could void the user's authority to operate the equipment.

If none of the remedies stop the radio interference, you should contact a licensed radio/television technician, your satellite dealer, or call the Customer Service Center at 1-800-333-DISH (3474) for assistance.
